

Home Connection

Now that your child understands dividing into equal groups, he will investigate fractions. In the classroom, he will fold and cut paper shapes into equal halves and fourths.

This brief, fun chapter provides an introduction to the terms “halves,” “fourths,” and “quarters.”

What can we do at home?

- Fold paper! Airplanes and hats are just a start. Try making a paper fortune teller. Not all folds will be in halves or fourths. Discuss when a paper is folded into equal parts and when it isn't. Added bonus: skip the fortune and write hard-to-learn math facts inside!
